Introduction

The team of Greenpeace has taken up a 4 month long project as requested by Abdullah al Jubair for creating a new project for us to display our skills. The project commenced from the week of 20/9/2022 and the team of Green Peace deployed for this project .We have made sure to give our all to this project and also discover new workthroughs which were previously unknown to us.

This project helped us in discovering our hidden potentials and we hope to venture further with this new found knowledge.

Motivation

" We have come to realize that the nursery sector of Bangladesh lacked a lot of proper modernization. It is still solely analog in terms of accessibility. So our team at Green Peace has made it our goal to make this untapped goldmine accessible for all via our easy to use system."

Source of motivation

Seeing something wrong within the system and thriving to make it better.

Approach to the idea

Spending countless hours brainstorming ideas to implement our concept to reality

Implementation

doing lines of coding to make this project a reality and having groups of people doing hours of beta testing to ensure no issues pertain.

Features

The following features have been implemented on our project.

Anyone can use

Rather approach for technologically simple minded people to use with ease

Easy user interface

Intuitive UI system to help in navigation

Regular stock take and inventory

Stock updates in real time so no need to double check.

Convenience

Accessibility at the palm of ones hand

Regular price update

Price check happen on a daily basis and gets updated accordingly.

Challenges

Whilst going through this project we faced a lot of hurdles that we had to come up with ideas along the way to resolve.
primarily our inefffecient approach towards issues at hand since making projects is a new concept to us.
implementing ideas and then scrapping it for a better way was our go to method.
But,we can proudly say tht we are prepared to take on moe daring challenges in the future,

Future Works

The team of Green Peace has performed quite remarkably during this project, finishing more work than estimated and having ample amount of time for proper testing of the pages and features built so that the possibility of bug existence is feeble. Our goals for the future have been summarized below:

Widespread reach

Having a wider range of audience so that our applications may come more in use

Find wider fields

Look for newer fields to implement ideas

Coding

increasing our efficiency in upcoming projects.

> We look forward to maintaining the same amount of consistency and do anything attitude in our next peojects.
